## Projects

International Economy

<http://www.genome-sy.com/>:

2004 - 2006

University/School Name

Genome-sy.com is Genome's institute official online platform for students registration, courses offerings and delivering the material. I've developed an algorithm to calculate students' commission when referring other students to register have also implemented real time notifications for the entire application activities. In addition to that, I've built a messaging system to enable the students communicate efficiently

<http://www.jomran.com/>:

Jomran.com is an online market that provides business-to-consumer sales services

<http://www.aya.sy>:

The purpose of Aya's website is to provide services to registered users including full access to functions such as changing the broadband width and speed of their internet service putting their account on hold, changing their account and changing their data traffic options, it also provides domain name registration as well as web hosting
